

WALLIFE, INSURTECH START-UP, SETS TO DOUBLE ITS WORKFORCE BY 2022

*New hires expected in the areas of technology, product
development and sales*

Rome, April 26, 2022 - Wallife, an innovative insurtech company that aims to protect individuals from risks arising from scientific and technological progress, targets doubling its workforce by 2022 and announces today the opening of new positions in the areas of technology, insurance product development and sales.

After the success of the company's first round of Seed funding closed at \$ 4.8 million, the start-up founded by Fabio Sbianchi and led by CEO Maria Enrica Angelone continues to grow and opens more than 10 positions in the Rome office and in the new office in **Zurich**, where the company's tech hub will be located. With a strong international vocation, Wallife aims to hire talents who are passionate about science and technology, and able to intercept innovation and market potential in the three areas explored by the company: **biometrics, genetics and biohacking**.

"In Wallife - underlines CEO Maria Enrica Angelone - we strive to promote the values of **scientific research and innovation**, which are the basis of the products we are developing and of our approach to the market. We want to play an active part in building the change within our sector, contributing to improving the safety of individuals, in a context of continuous technological evolution. We strongly believe that human capital is an indispensable asset to ensure virtuous growth that allows generating long-term value for all stakeholders."

Wallife was born from a strongly innovative idea of business: to protect and **insure human life in all its phases**, from embryonic to after life, with the aim of protecting the genetic heritage of people as well as their identity, elements that are increasingly exposed to hacks.

You can consult the open positions at wallife.com/corporate/careers or send your resume to careers@wallife.com.

ABOUT WALLIFE

Wallife is the first company in the world able to provide answers on security and protection of the individual from still unknown risks, which to date operates in three areas of research (Biometrics, Genetics, Biohacking). Wallife's mission is to protect people for the entire span of their existence and beyond. Studying the ever-changing landscape, in view of the opportunities of science and technology, Wallife investigates new risks, new problems, and unprecedented criticalities to which human beings could - or may be exposed. Areas of strong interest include genetic manipulation, biohacking, and the use of digital data. In addition to investigating new and emerging risks, Wallife's goal is to design innovative insurance products to address existing and known risks that are not covered by currently available offerings.
